Overview

The S&P Capital IQ Pro plug-in allows users to pull data directly into a Microsoft Excel workbook using proprietary functions. The S&P Capital IQ Pro plug-in is a web services application that uses web-based dialogs instead of traditional VBA forms. S&P Capital IQ Pro plug-in requires a client-side installation before users can use the application. Since S&P Capital IQ Pro plug-in is a web services application, it accesses data over a secured internet connection rather than from a localized network database.

Office Tools is a suite of productivity tools in Excel, PowerPoint and Word that allow users to quickly build, format and audit Excel models; and link data from Excel models to PowerPoint, or Word, that can be updated with the click of a button. Office Tools also offers the Content Library, which allows users to build company-compliant presentations directly in PowerPoint, leveraging pre-approved master templates, presentations, slides and more. The Content Library comes in two versions – Branding and Enterprise. Branding is included in the default Office Tools installation. Enterprise, which has more robust functionality and client-side customizability, requires additional coordination with our Support team.

Office Tools, Content Library, and the S&P Capital IQ Pro plug-in are three separate add-ins that come packaged together in one installer that make the full S&P Capital IQ Pro suite of products. To properly install the S&P Capital IQ Pro plug-in, the computer running the application must meet the following system requirements.

System Requirements

Supported Windows Operating Systems:	Windows 8 (32-bit & 64-bit), Windows 8.1 (32-bit & 64-bit), Windows 10 (32-bit & 64-bit), Windows 11 (64-bit)
Supported Microsoft Excel Versions [*] :	2016 (32-bit & 64-bit), 2019 (32-bit & 64-bit), 2021 (32-bit & 64-bit) Office 365 (2016 & 2019: local installs only; excludes web-based or MS App Store versions; excludes Current Preview and Beta Channels)
Supported Browsers:	Microsoft Edge, Google Chrome
Additional Microsoft Requirements:	Microsoft .NET 4.8 and later, Microsoft Visual Studio 2010 Tools for Office Runtime
Internet access to:	*.spglobal.com, idm-iag.capitaliq.com, *.snl.com
Internet access through:	Port 443 (SSL)
Minimum Recommended Hardware:	CPU: 2 gigahertz (GHz) or faster x86 – or x64 processor RAM: 8 gigabytes (GB) or more

* Downloading Excel via Office 365 has limited support for Excel add-ins. Please contact your IT department for assistance with installation.

In addition to confirming that your computer meets the System Requirements listed above, you must have administrator permission to download and install new software on your computer. If you are uncertain about your level of access or you do not have this permission, please contact your IT department for assistance.

The Content Library (Enterprise Version) requires setting up an application server at your company. Please contact our support team for more information.

Installation Details

Once you have confirmed that you meet all the conditions above, you may install S&P Capital IQ Pro software on your computer. Before attempting to install S&P Capital IQ Pro on your computer, close all open instances of Excel, PowerPoint, and Word.

To download the S&P Capital IQ Pro, visit the [S&P Capital IQ Pro Download Page](#) and follow installation instructions. To ensure proper functionality, a system log-out and back in is necessary for any installation that requires administrator (elevated) privileges.

CIQ Backwards Compatibility

During the S&P Capital IQ Pro installation process, there will be an option to enable backwards compatibility for CIQ Functions so they can be refreshed through the S&P Capital IQ Pro add-in.

Choosing “Yes” will not uninstall CIQ, but after making this choice, uninstalling S&P Capital IQ pro would require reinstalling CIQ Excel add-in in order to refresh CIQ functions again. By choosing this option, S&P Capital IQ Pro will inherit any of the similar settings from CIQ such as Display Null Value As, Refresh default (Cell vs Entire Sheet).

We support CIQ backwards compatibility using host name idm-iag.capitaliq.com.

If issues are encountered with refreshing functions, the recommended steps are to:

1. Uninstall both S&P Capital IQ Pro and CIQ add-in
2. Re-install both add-ins
3. When installing S&P Capital IQ Pro, select “No” option.

Choosing the “No” option will install S&P Capital IQ Pro alongside the CIQ Excel add-in, and will only refresh SNL/SPG functions, while the CIQ Excel add-in will need to be used to refresh CIQ functions.

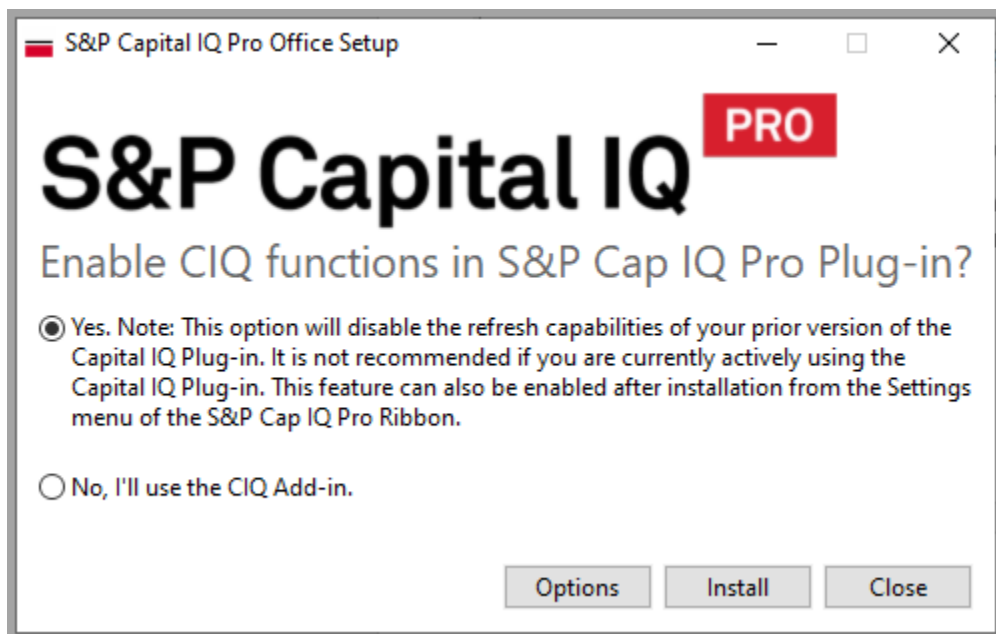

Figure 1: Option to enable CIQ functions to be refreshable using S&P Capital IQ Pro during install.

All plug-in versions starting from 21.08 also support the ability to toggle CIQ function refreshes via the Capital IQ Pro add-in through the Settings window. Users are not restricted to the choice made during installation.

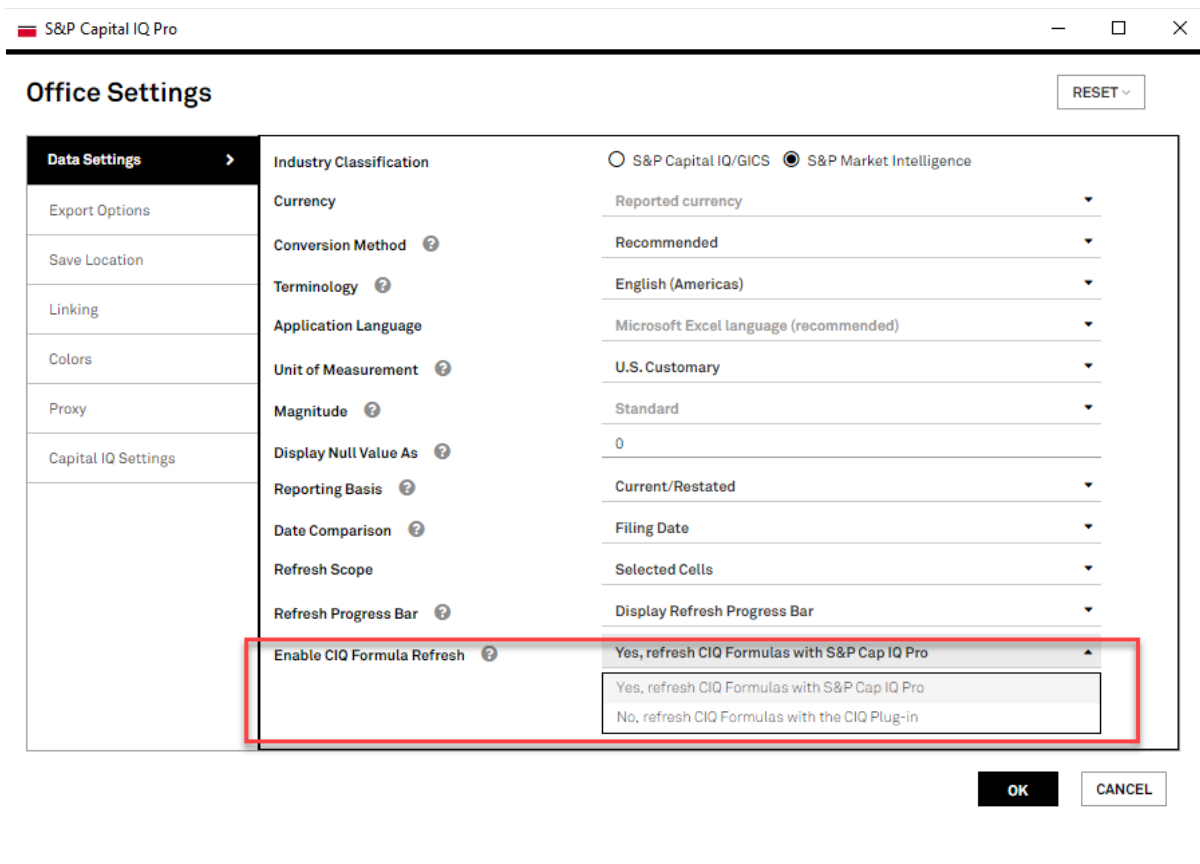

Figure 2: Option to enable CIQ functions to be refreshable using S&P Capital IQ Pro after install.

Updating this option would require a user to close all instances of the excel application for the settings to apply successfully.

Note: There might be instances where the S&P Capital IQ Pro Plug-in does not appear in the Excel toolbar after installation. This may be caused by Microsoft Office blocking applications from creating child processes. Additional details are available [here](#).

Locations and Directories

IT administrators need to ensure that the **HKEY_CURRENT_USER\Software\SNL Financial\SNL Office** registry key (and sub-keys) are readable and writable by the user's account. This registry key is used to store application configuration data. For mixed environments (64-bit Windows/32-bit Excel), registry entries should be made in **HKEY_CURRENT_USER\Software\Wow6432Node\SNL Financial\SNL Office**.

IT administrators will also need to allow users to read and write to Windows .NET isolated storage. Isolated storage is used by S&P Capital IQ Pro to store additional application configuration data and is encrypted using Advanced Encryption Standard (AES) with a 256-bit key. docs.microsoft.com/en-us/dotnet/standard/io/isolated-storage.

The key and initialization vector for AES are also stored in isolated storage, encrypted using Windows Data Protection API (DPAPI) in a local-machine mode. (User mode is not used because of potential data loss scenarios associated with that mode.) Extra entropy for DPAPI for each user is generated and stored under the registry key **HKEY_CURRENT_USER\Software\SNL Financial\SNL Office\Encryption**.

Thus, the encryption is distinct for each user of a machine even though DPAPI is used in local-machine mode. In order to ensure that one user of a machine cannot access the entropy associated with another user of the same machine, and thereby gain access to the AES key and initialization vector and, by extension, that user's encrypted data, set appropriate access-control lists on the **HKEY_CURRENT_USER\Software\SNL Financial\SNL Office\Encryption key** (or the entire HKCU hive) to restrict access to the appropriate user. For mixed environments (64-bit Windows/32-bit Excel), registry entries should be made in **HKEY_CURRENT_USER\Software\Wow6432Node\SNL Financial\SNL Office\Encryption**.

S&P Capital IQ Pro supports Windows environment variables, e.g., **%USERPROFILE%**, when reading the registry settings. Environment settings allow administrators to write registry keys that are redirected to the appropriate user-specific directory in multi-user environments.

Default Installation Locations

%Program Files%\SNL Financial\SNLxL*

%Program Files%\SP Global Market Intelligence*

*May be within %ProgramFiles(x86)%

Application Settings

%AppData%\IsolatedStorage

Unique data compartment with individual data stores used to house the application's settings and other supporting data

Application Logging

%LocalAppData%\SPGMI

This location is reserved for the application's log files

OPEN Keys

Registry Location: **HKEY_CURRENT_USER\Software\Microsoft\Office\16.0\Excel\Options**

- OPEN = "C:\Program Files (x86)\SNL Financial\SNLxL\SNLXLAddin.xla"
- OPEN1 = /A "SNL.Clients.Office.Excel.Functions"
- OPEN2 = /A "ciqfunctions.udf"
- OPEN3 = "C:\Program Files (x86)\SP Global Market Intelligence\SP Capital IQ Office Tools\Excel\PresCenterAPI.xlam"

- If any keys are in an improper state, they will be fixed automatically upon startup of Excel
- The order of the OPEN keys is not important, so long as the original OPEN key is present
- "16.0" is dependent upon your version of Office, and the exact path is dependent upon the install location
- These keys are added via Active Setup

Saved Queries

S&P Capital IQ Pro allows users to save projects and screens. If SNL Office was previously installed, the default location for storage of these files is: **%USERPROFILE%\ Documents\SNL Financial\SNLx\SNLQueries**. If no previous add-in was installed, the default location for storage of these files is:

%USERPROFILE%\Documents\S&P Global Market Intelligence\ S&P Capital IQ Office\Queries. Users can manually change the setting for this location by

using the option in the application's Settings dialog. If SNL Office or CIQ Excel add-in was previously installed on the user's computer, S&P Capital IQ Pro respects the settings and by extension honors the registry settings.

For a custom SaveQueriesLocation please see [packaging section](#).

Browser Cache

S&P Capital IQ Pro allows users to minimize the use of browser cache by directing more data, e.g., schema files, CSS files, .js files, images, etc. to isolated storage. This capability is helpful if the user has a limited amount of browser cache and is concerned that they may not have enough storage space reserved for the use of web-based applications such as S&P Capital IQ Pro.

To make this change to the application, create a string registry value named **PreferIsolatedStorage** under the registry key **HKEY_LOCAL_MACHINE\Software\SNL Financial\ SNL Office** and set the value to 1 if you wish to send more data to go to isolated storage and less

to the browser cache location. To send more data to the browser cache location and less to isolated storage set the value to 0. If the value is not specified in the registry then it will behave as if it were set to 0. For mixed environments (64-bit Windows/32-bit Excel), registry entries should be made in **HKEY_LOCAL_MACHINE\Software\Wow6432Node\SNL Financial\SNL Office**.

Dialogs

User interface dialogs are rendered using Microsoft Edge WebView2 (Evergreen Runtime) in an embedded web browser control. If enough cache space is not available, this can negatively impact the performance of the application. Office Tools interface dialogs are developed in Windows Presentation Framework (WPF).

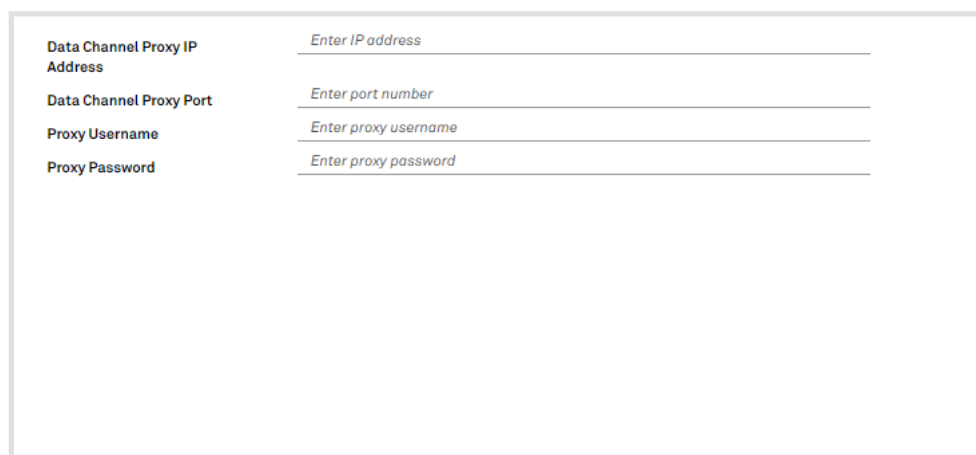

Connecting With a Proxy

S&P Capital IQ Pro connects to its servers through HTTPS port 443. This connection is initiated by the user and is authenticated by a username/password protocol.

Note: S&P Capital IQ Pro resolves the proxy settings from Internet Options within Microsoft Edge Default Browser settings. If your default proxy server possesses data usage restrictions and you would like to utilize dedicated proxy to handle function refresh calls, then the proxy settings must be specified. Note that other traffic within S&P Capital IQ Pro Office, such as log-in, will continue to be managed by Windows/Internet Options proxy settings.

This can be accomplished using either of the following methods:

- In the user interface, click on Settings in the S&P Cap IQ Pro Ribbon and enter your proxy information as shown in Figure 3 below.

Data Channel Proxy IP Address	Enter IP address
Data Channel Proxy Port	Enter port number
Proxy Username	Enter proxy username
Proxy Password	Enter proxy password

Figure 3: Proxy Server Settings.

- Under the S&P Capital IQ Pro registry keys **HKEY_CURRENT_USER\Software\SNL Financial\SNL Office**, create a string registry value named **ProxyServer**. Your registry key location may differ slightly depending on your machine's configuration – after the S&P Capital IQ Pro Office Plug-In is installed, locate the SNL Financial folder and place the setting key within it. Enter the proxy hostname and port number in the entry, e.g., 127.0.0.1:8888. You may enter the protocol, e.g., http:// or https://, in the registry but if none is entered then http:// is used by default. This method is helpful if you are an IT administrator and packaging S&P Capital IQ Pro as it allows you to specify the proxy settings that reside in the registry/installation folder on each user's computer.
- Please note that it is only possible to change ProxyServer and Proxy Port using registry keys. Proxy Username/Password can only be entered via the Settings page shown above in Figure 3.

Language Settings

S&P Capital IQ Pro supports English, Spanish, German, Portuguese, Chinese, and Japanese languages. By default, S&P Capital IQ Pro will load the same language as Microsoft Excel that is installed on a user's computer. In order to use foreign languages with S&P Capital IQ Pro, the appropriate OS and Excel language packs must be installed. If the Microsoft Excel language is not currently supported, it will default to English. To change the S&P Capital IQ Pro application language, select Settings in the S&P Cap IQ Pro Ribbon. Within the Settings dialog, select the desired application language. After changing the application language, you must completely restart Microsoft Excel for the change to take full effect. Upon reopening Microsoft Excel, you will see the S&P Cap IQ Pro Ribbon in the language you have selected. Dialogs such as the Data Wizard will appear in the selected language.

Packaging S&P Capital IQ Pro Office

Once the S&P Capital IQ Pro client is installed, it is available to users in Excel whenever Excel is launched. It loads as an Add-in and provides a S&P Cap IQ Pro Ribbon. Office Tools is available in Excel, PowerPoint, and Word.

To download the S&P Capital IQ Pro, visit our [S&P Capital IQ Pro Advanced Download Page](#) and follow installation instructions.

Option to disable (set to 0) the plugin through the registry for the users who do not require access to the plugin:

HKCU\Software\Microsoft\Office\Excel\Addins\SNL.Clients.Office.Excel.ExcelAddIn\LoadBehavior
HKLM\Software\Microsoft\Office\Excel\Addins\SNL.Clients.Office.Excel.ExcelAddIn\LoadBehavior

S&P Capital IQ Pro – CIQ Compatibility Enabled
(S&P Capital IQ Pro will take over CIQ refresh functionality)

MSIEXEC /i SPCapIQPro-x[86 or 64]-1.X.XXXXX.X.msi

S&P Capital IQ Pro – CIQ Compatibility Disabled
(S&P Capital IQ Pro will not take over CIQ refresh functionality)

MSIEXEC /i SPCapIQPro-x[86 or 64]-1.X.XXXXX.X.msi
DISABLECIQCOMPATIBILITYADDIN=1

S&P Capital IQ Pro Install to specific user group (not all users)

MSIEXEC /qn /i C:\SPCapIQPro-x[86 or 64]-1.X.XXXXX.X.msi
ALLUSERS=1 DISABLE_ACTIVE_SETUP=1

Uninstallation Using GUID

Find the GUID by running the command below in PowerShell:

Get-WmiObject Win32_Product | Where-object Name -match 'S&P Capital IQ Pro Office' | Format-Table IdentifyingNumber, Name

Alternative PowerShell Commands

x86 Installer on x64 Office environment:

ItemProperty HKLM:\SOFTWARE\Wow6432Node\Microsoft\Windows\CurrentVersion\Uninstall* | Where-Object { \$_.DisplayName -like "* S&P Capital IQ Pro Office*" } | Select-Object DisplayName, UninstallString

All other installations:

ItemProperty HKLM:\SOFTWARE\Microsoft\Windows\CurrentVersion\Uninstall* | Where-Object { \$_.DisplayName -like "* S&P Capital IQ Pro Office*" } | Select-Object DisplayName, UninstallString

Alternatively, the GUID can be found in the registry:

x86 – HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\Microsoft\Windows\CurrentVersion\Uninstall x64 – HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Uninstall

Uninstallation Example:

MI Office 20.4 – {1BB0E897-2F12-4480-BCA6-185A5E5E314D}

MSIEXEC /X {1BB0E897-2F12-4480-BCA6-185A5E5E314D}

Custom Saved Query Location

If a custom SaveQueriesLocation is needed, create a string registry value named SaveQueries Location under the registry key **HKEY_CURRENT_USER\Software\SNL Securities\XLClientAddin\Settings** and enter the path to that location, e.g., **%USERPROFILE%\Documents\S&P Global Market Intelligence\S&P Capital IQ Office\Queries**. This will set the S&P Capital IQ Pro Saved Queries Location folder to the desired location for each

user. For mixed environments (64-bit Windows/32-bit Excel), registry entries should be made in **HKEY_CURRENT_USER\Software\Wow6432Node\SNL Securities\XLClientAddin\Settings**.

Common Packaging Queries

Installing the S&P Capital IQ Pro Office Plug-in MSI without user prompts (silent install)

- `msiexec /i <PLUGIN MSI FILEPATH> /qn /norestart`

Allow the MSI to skip loading the S&P Capital IQ Pro Office Plug-in during the installation process

- `msiexec /i <PLUGIN MSI FILEPATH> NOXLA_INSTALL="1"`

Creating a detailed log of the installation progress

- `msiexec /i <PLUGIN MSI FILEPATH> /L *v C:\CapIQProInstall.log`

Changing the installation path for the S&P Capital IQ Pro Office Plug-in

- `msiexec /i <PLUGIN MSI FILEPATH> INSTALLFOLDER="C:\tempPath" !*v "C:\CapIQProInstall.log"`

S&P Capital IQ Pro Plugin Manager

Plugin Manager is a diagnostic tool that is included when S&P Capital IQ Pro Add-in is installed. It is used to gather information related to the add-in and the machine. We can also fix common issues in the add-in with the use of this application. This includes options for deleting add-in folder in the Local and Roaming app data in the computer, so the person needs to have an Admin access for them to use this application. Options in the Plugin manager is grayed out if they don't have Admin access in the machine.

To download the S&P Capital IQ Pro Plugin Manager, visit our [S&P Capital IQ Pro Advanced Download Page](#).

Testing Your Installation

After S&P Capital IQ Pro is installed, to confirm that an installation (or packaging/rollout) was successful, follow the steps described in our [test script guide](#).

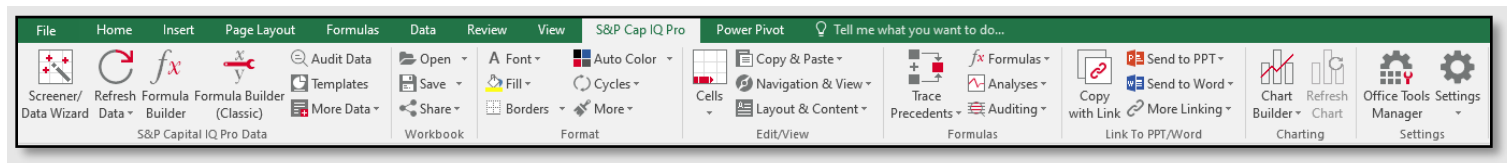

Figure 3: S&P Cap IQ Pro Ribbon in Microsoft Excel.

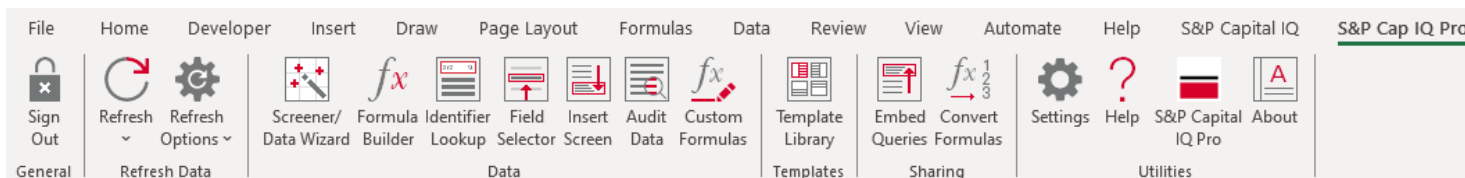

Figure 4: S&P Cap IQ Pro Ribbon (without Office Tools) in Microsoft Excel

If your plug-in ribbon resembles Figure 4, the Office Tools capability is either disabled or was not installed. Without Office Tools, it will not be possible to link to other Office apps like PowerPoint or Word, utilize custom formatting cycles, or take advantage of any other Office Tools functionality. More information regarding Office Tools can be found here: [Office Tools Overview](#).

If the Office Tools component is installed but not visible, it can be re-enabled via File > Options > Add-ins > Manage COM Add-ins – ensure the box next to SPGMI Excel Tools is checked, click OK, then close and reopen Excel.

If Office Tools did not download properly, it can be retrieved via the S&P Capital IQ Pro Advanced Download Page linked above. There are separate installers for 32- and 64-bit Excel.

About S&P Global Market Intelligence

At S&P Global Market Intelligence, we understand the importance of accurate, deep, and insightful information. We integrate financial and industry data, research and news into tools that help track performance, generate alpha, identify investment ideas, perform valuations, and assess credit risk. Investment professionals, government agencies, corporations and universities around the world use this essential intelligence to make business and financial decisions with conviction.

S&P Global Market Intelligence is a division of S&P Global (NYSE: SPGI), the world's foremost provider of credit ratings, benchmarks and analytics in the global capital and commodity markets, offering ESG solutions, deep data and insights on critical business factors. S&P Global has been providing essential intelligence that unlocks opportunity, fosters growth and accelerates progress for more than 160 years. For more information, visit www.spglobal.com/marketintelligence.
