System Requirements

The Content Library (Enterprise Version) requires setting up an application server at your company. Please contact our support team for more information.

Supported Windows Operating Systems:	Windows 8 (32-bit & 64-bit), Windows 8.1 (32-bit & 64-bit), Windows 10 (32-bit & 64-bit), Windows 11 (64-bit)
Supported Microsoft Excel Versions*:	2013 (32-bit & 64-bit), 2016 (32-bit & 64-bit), 2019 (32-bit & 64-bit) Office 365 (2013 & 2016 & 2019: local installs only; excludes web based or MS App Store versions)
Supported Browsers:	Microsoft Edge, Google Chrome
Additional Microsoft Requirements:	Microsoft .NET 4.8 and later, Microsoft Visual Studio 2010 Tools for Office Runtime
Internet access to:	*.spglobal.com, *.capitaliq.spglobal.com, *.platform.capitaliq.spglobal.com, sso.spglobal.com, idm-iag.capitaliq.com, platform.spgi.spglobal.com, cdn.spgi.spglobal.com, *.snl.com
Internet access through:	Port 443 (SSL)
Minimum Recommended Hardware:	CPU: 2 gigahertz (GHz) or faster x86 – or x64 processor RAM: 8 gigabytes (GB) or more

The Content Library (Enterprise Version) requires setting up an application server at your company. Please contact our support team for more information.

* Downloading Excel via Office 365 has limited support for Excel add-ins. Please contact your IT department for assistance with installation.

In addition to confirming that your computer meets the System Requirements listed above, you must have administrative permission to download and install new software on your computer. If you are uncertain or you do not have this permission, please contact your IT department for assistance.

Installation Details

Once you have confirmed that you meet all the conditions above, you may install S&P Capital IQ Pro software on your computer. Before attempting to install S&P Cap IQ Pro on your computer, close all open instances of Excel, PowerPoint, and Word.

To download the S&P Cap IQ Pro add-in, visit the [S&P Capital IQ Pro Download Page](#) and follow installation instructions. You can also reference the S&P Cap IQ Pro Technical Guide [here](#).

Language Options

S&P Capital IQ Pro supports English, Spanish, German, Portuguese, Chinese, and Japanese languages. By default, S&P Capital IQ Pro will load the same language as Microsoft Excel that is installed on a user's computer. In order to use foreign languages with S&P Capital IQ Pro, the appropriate OS and Excel language packs must be installed. If the Microsoft Excel language is not currently supported, it will default to English. To change the S&P Capital IQ Pro application language, select Settings in the S&P Capital IQ Pro Ribbon. Within the Settings dialog, select the desired application language. After changing the application language, you must completely restart Microsoft Excel for the change to take full effect. Upon reopening Microsoft Excel, you will see the S&P Capital IQ Pro Ribbon in the language you have selected. Dialogs such as the Data Wizard will appear in the selected language.

Function Dependencies

S&P Capital IQ Pro detects dependencies among S&P Capital IQ Pro functions and refreshes those functions in an order that respects these dependencies. An unbroken chain of dependent S&P Capital IQ Pro functions will refresh in proper order, even if the functions span multiple worksheets. If a chain of dependent functions includes cells with non-S&P Capital IQ Pro functions, e.g., Excel's =AVERAGE() function, and a dependency involving a non-S&P Capital IQ Pro function spans multiple worksheets, that dependency will not be taken into account in the refresh order. This is due to a limitation with how Excel reports cell dependencies across worksheets.

Navigating S&P Cap IQ Pro in the Excel Ribbon

After S&P Capital IQ Pro is properly installed, it automatically appears in Microsoft Excel as a new ribbon tab labeled S&P Cap IQ Pro as shown below in figure 1.

Figure 1: S&P Capital IQ Pro in Microsoft Excel

Listed below is a brief description of each button in the S&P Cap IQ Pro ribbon.

Screener/Data Wizard

Access the Data Wizard/Embedded Screener. To learn more about the Data Wizard, see the Data Wizard section in this document.

Formula Builder

Open the Formula Builder to create and add SPG Functions to your workbook. To learn more about the Formula Builder, see the Formula Builder section in this document.

Trace Precedents

Examine and navigate to all cells that affect the value of the current cell. Examine precedents of precedents, view header information for the cells and work across worksheet and workbooks.

Chart Builder

Access the S&P Capital IQ Pro Chart Builder.

Office Tools Manager

Access the Office Tools Manager to modify or create keyboard shortcuts.

Sign In

Sign-In to S&P Cap IQ Pro

Settings

Select this button to modify Proxy, Data Settings, Export Options, Save Location, Linking and Colors.

Audit Data

Access ratio components and tagging details linked to source documents for select data points in your SPG function-driven models.

Templates

Easily access Capital IQ Pro's Excel Template Library that contains over 100 pre-built templates to meet your data analysis needs.

Refresh Data

Select which cells to refresh in your SPG/SNL function driven models. By default, when the Refresh button is clicked the entire worksheet is refreshed. If you want to control which part of your active workbook is refreshed, click the bottom portion of the button and choose from Selected Cells, Entire Sheet or All Sheets.

You can insert refresh buttons into your workbook to customize your workbook. Each button contains VBA code that controls which portion of the workbook is refreshed. To learn more about this feature, see the Advanced Refresh Data Options section in this document.

Select Automatically Refresh Data if you want functions to refresh automatically when a change is made or leave this setting as its default, Manually Refresh Data for full control of refreshing functions.

More Data

Click on More Data to access additional functionalities such as Identifier Lookup, Field Selector, Custom Formulas, Insert Screen and Convert Formulas.

Formula Builder

The Formula Builder is designed to help you build single-cell functions or range of value functions from scratch using a step-by-step guide to help you determine which parameter you need to enter for an SPG or SPGRangeV function.

To access the Formula Builder, click the S&P Cap IQ Pro tab in the ribbon and select Formula Builder. Once you have finished selecting your desired options, click on Apply at the bottom right of the window to add your formula(s) to the worksheet.

Searching

Select Identifier to input a ticker or MI Key. Select Cell to insert a cell reference containing an identifier.

Data Set

Use the top navigation drop-down menu to select the data set that you want to build formulas for.

Data Item Keyword

You can search for metrics by entering keywords in the Data Items box. Clicking on a metric from the search results will add it to your formula.

Formula Type

You can retrieve a single value, a range of data depending on the metric.

Selected Formulas

The Selected Formulas box shows you all of the formulas that you have built. You can double-click a formula to delete it from the box.

Add Formula

When your formula is complete, click on Add Formula to add it to your selected formulas. Clicking Add Field will add only the metric. – e.g. SP_TOTAL_REV.

Formula Location

You can choose the cell you would like to add the formula in. The default formula location is the cell you accessed the Formula Builder from.

Formula Layout

When adding multiple formulas at the same time, you have the option to apply the formulas down a column or across a row.

Figure 2: Click on 'Add Formula' to Apply

Single Value/Range of Values

Some of the metrics like Fundamentals, Market Data etc... support Single Value as well as Range of values. When metric selected then Parameter section allow user to choose Single Value v/s Range of Values option. Single Value will export SPG function which will pull data for selected period while Range of Value will allow user to pull range of data for specified data item and identifier.

For Financial metrics, you can choose Range of Values from dropdown which will update period to Beginning Period as relative period dropdown. If you're looking for data item for last 8 fiscal year for specific entity, then choose Beginning period as FY-8 which will show function preview as shown below. Adding this into shopping cart and export to excel will pull data from FY0 to FY-8 (9 data points) for selected metric.

Period Type

You can choose either Relative (or) Absolute Period types for formulas to retrieve the information into excel.

Relative Period References

You can select Relative Periods check box within Period Type dropdown to view/display all the available relative periods under the Periods dropdown for formulas to get automatic updates when new numbers are available. These period types can be modified using the +/- to go back historically or forward for estimates (i.e. FY-1, FY+1).

Fiscal Periods

Year	Quarter	Half
FY0	FQ0	FH0
FY-1	FQ-1	FH-1
FY+1	FQ+1	FH+1

Calendar Periods

Year	Quarter	Half*
CY0	CQ0	CH0
CY-1	CQ-1	CH-1
CY+1	CQ+1	CH+1

* CH Half periods will be added in future releases for historical financials.

Last Twelve Months (LTM)

S&P Capital IQ Pro calculates LTM results for a period end date by adding the difference of the financials from the year-to-date period on that date and the corresponding year-to-date period from the prior year, to the financials from the most recently completed fiscal year results as of that date. Ex. LTM, LTM-1.

Year to Date (YTD)

Year to Date period type provides the ability to pull the financials on YTD basis for all the historical financials. Ex. YTD, YTD-1.

Next Twelve Months (NTM)

NTM Estimate are calculated using either the sum of the next four Quarterly Estimates or proportions of current and following Calendarized Estimates if Quarterly Estimates are not available. Only NTM as period reference.

Absolute Period References

Alternatively, you can select Absolute Periods check box within Period Type dropdown to view/display all the available absolute periods under the Periods dropdown for formulas to retrieve values for the specified absolute period.

Fiscal Periods

Year	Quarter	Half
FY####	FQ#####	FH#####
e.g. FY2020	e.g. FQ12020	e.g. FH12020

Calendar Periods

Year	Quarter	Half*
CY####	CQ#####	CH#####
e.g. CY2020	e.g. CQ12020	e.g. CH12020

Advanced Options

Specify the Filing Version, Currency, Magnitude, Display Null Value As, Sort order, Date Placement or Caption from Advanced options. If left blank, these will default to the global settings. Optional arguments changed based on function type (SPG v/s SPGRangeV) as well as metric selection. Market data metric will have Fill/Frequency as optional argument which is not applicable to Financial metric.

= Total Revenue	60,472,778	

Detailed Ownership Range of Values

Detailed Ownership metrics support Range of Values functionality. When metric selected then Parameter section allows user to enter Start Rank and End Rank, it will output the number of results based on the Ranks by number of shares held by shareholder. User can select/reference As-of Date to get the data as of As-on Date. View Security Option will allow the user to pull Shareholders at a Summary (or) Company/Security Level Details.

The screenshot displays the S&P Capital IQ Pro interface. On the left, a table lists institutional owners with their shares held, percent held, and market value. On the right, the 'SPGRANGEV' configuration panel is shown, allowing users to select data items, set parameters like rank range and date, and choose advanced options like currency and magnitude.

Institutional Owner Name	Shares Held by Institutional Owner	Percent Held by Institutional Owner	Market Value of Institutional Holder
Vanguard Group Inc.	613,530,808	7.08	10,560.5
BlackRock Inc.	509,925,375	5.89	8,793.3
State Street Global Advisors Inc.	320,037,197	3.69	5,519.1
FMR LLC	163,081,197	1.88	2,812.4

Geode Capital Management LLC	112,441,496	1.30	1,939.1
Dodge & Cox	129,019,857	1.49	2,225.0
JP Morgan Asset Management	91,441,827	1.06	1,576.5
Norges Bank Investment Management	100,488,410	1.16	1,733.0
Northern Trust Global Investments	86,496,744	1.00	1,491.7

SPGRANGEV Configuration Panel:

- Companies:** NYSE:BAC
- Data Items:** Institutional Owner Name, Percent Held by Institutional Owner, Shares Held by Institutional Owner, Market Value of Institutional Holder, Change in Shares of Institutional Holder, Percent Change in Shares of Institutional Holder, Institutional Derivatives, Institutional Owner Date, Insider Owner Name, Percent Held by Insider Owner
- Parameters:** Rank By: 1 to 10, As Of Date: 10/20/2020, View Security: Summary
- Advanced Options:** Currency: British Pound Sterling (GBP), Magnitude: Millions (M), Display Null Value As: Enter or select a cell reference, Rank: 01/01/2020
- Selected Formulas:**

```
=SPGRANGEV("NYSE:BAC","SP_MARKET_VALUE_INSTITUTIONAL_HOLDER","1","10","10/20/2020","Summary","Options: Rank=DATE,Curr=GBP,Mag=Millions")
```
- Formula Layout:** Across a row, **Output Location:** =Sheet1!D2

Advanced Options

Specify the Currency, Magnitude, Display Null value, Rank Date Option to sort the shareholder order based on Rank Date, or Caption from Advanced options. If left blank, these will default to the global settings.

Rank Date default to Today's Date.

SPGRANGEV Function Syntax:

The SPGRANGEV function syntax is as follows:

=SPGRANGEV("IDENTIFIER", "DATA_ITEM", "START RANK", "END RANK", "AS-OF DATE", "VIEW SECURITY", "Options:

Rank="DATE",Curr=GBP, Mag=Millions")

=SPGRANGEV("NYSE:BAC","SP_INSTITUTIONAL_VALUE","1","10","10/5/2020","SUMMARY","Options:

Rank="1/1/2020",Curr=GBP, Mag=Millions")

Detailed Estimates Single Value/Range of Values

Detailed Estimates metrics like Revenue Detailed Estimate, Target Price Estimates etc., support Single Value as well as Range of values. When metric selected then Parameter section allow user to choose Single Value v/s Range of Values option. Single Value will export SPG function which will pull data for selected period while Range of Value given by various contributors will be pulled as range of data for specified Identifier, data item and Period.

SPGRANGEV Function

The screenshot shows the S&P Capital IQ Pro interface with the 'SPGRANGEV' function selected. The 'PARAMETERS' section is set to 'Range of Value'. The 'DATA ITEMS' list includes 'Detailed Estimates' and 'Contributor Estimates'. The 'ADVANCED OPTIONS' section shows 'Currency' as 'Nothing Selected', 'Magnitude' as 'Nothing Selected', 'Display Null Value As' as 'Error or select a cell reference', 'Caption' as 'Error or select a cell reference', and 'Rank' as '03/19/2022'.

SPG Function

The screenshot shows the S&P Capital IQ Pro interface with the 'SPG' function selected. The 'PARAMETERS' section is set to 'Single Value'. The 'DATA ITEMS' list includes 'Detailed Estimates' and 'Contributor Estimates'. The 'ADVANCED OPTIONS' section shows 'Currency' as 'Nothing Selected', 'Magnitude' as 'Nothing Selected', 'Display Null Value As' as 'Error or select a cell reference', 'Caption' as 'Error or select a cell reference', and 'Rank' as '03/19/2022'. The 'SELECTED FORMULAS' section shows the formula: '=SPG("IBM","SP_CONTRIB_ID_DET_EST","FY+1","09/29/2020","8183184")'.

Advanced Options

Specify the Currency, Magnitude, Display Null value, Caption and Rank Date from Advanced options. If left blank, these will default to the global settings. Rank Date will default to today's date. Optional arguments changed based on function type (SPG v/s SPGRangeV) as well as metric selection.

Using the Data Wizard

Click Data Wizard in the S&P Capital IQ Pro Ribbon as shown in Figure 3 below. The S&P Capital IQ Pro Data Wizard will open in a separate dialog.

Select Data Set

To begin your research and analysis, select the dataset that is relevant to your workflow using the top navigation. You can collapse the Browse Criteria section by clicking the « control or modify the layout of the Browse Criteria from the default Vertical Layout to a Horizontal Layout by clicking the □ control.

Note that only those data sets that are part of the user's subscription and industry settings (as set in S&P Capital IQ Pro), will be displayed in the Data Wizard.

Working with Criteria

To filter your results, you can begin by using fields from the Recommended Criteria or the Browse Criteria. Clicking on fields from the Recommended Criteria adds them to the Criteria section directly as shown in Figure 2. Select appropriate operators and values, and click on Add to commit the criteria to your screen.

Figure 2: Add Criteria in Data Wizard

Clicking on fields from the Browse Criteria launches the Field Selector.

Field Selector

Field Search

Add Field as a Criteria, Ranking, or Display Column by adjusting the settings in a desired tab and clicking on "Add" or "Done"

- Choose appropriate operators.
- Enter relevant values.
- Select Advanced Criteria, such as Business Relationships (Parent Companies, Direct Subsidiary, and Financial Parents etc.) to further filter your criteria.
- Alternatively, you can rank your data on certain criteria by clicking on the Ranking tab. Users have the ability to rank by quartiles, quintiles, deciles, percentiles and absolute ranks.
- The field selector also allows users to add metrics as Display Columns only, without the need to close out the Field Selector. Select the Display Column tab, and add/re-order fields in your report by dragging the metrics as required.
- Click on Add to commit the current criteria to your screen, and to continue exploring additional fields/criteria in the Field Selector.
- Click on Done or Cancel to close the Field Selector.

Figure 5: Main Data Wizard Dialog

Click the Run Screen button.

You will notice that a list of entities and their associated Institution Keys is displayed in the Screening Results section, along with data for each criteria that you have added. The number of results depends on the user’s subscription and industry Settings as noted above.

Display Columns

Figure 6: Results displayed from running screen

Click the Display Columns button as shown in Figure 5 above to add data points to your report.

Figure 7: Field Selector accessible via Display Columns

- Select desired metric and double click to add a field to your report. Alternatively, you can use the right/left arrows to add/remove fields from your report.
- You will see the field displayed in the Selected Field Section. You can re-order these fields by selected them and clicking on the up/down arrows.
- Some metrics have additional parameters associated with them, which you can select/modify in the Parameters section when you select the metric.
- You can also order your screening results by ranking them by quartiles, quintiles, deciles, percentiles or absolute ranks.
- Click on Apply to close the Field Selector and commit your changes.
- Click on Cancel to close the Field Selector without committing your changes.

The results of your report are displayed in the dialog as shown in Figure 8 below:

Figure 8: Export Report to Excel

Export to Excel

The Data Wizard allows the following options to export data from the result grid –

- Result as Table Function: Exports the results that allows data refresh via an SPGTable function
- Result as Single Cell Function: Exports the results that allow data refresh via single cell SNL excel functions
- Result as Values: Exports a static list of data
- Result as List: Exports the primary columns from the result grid (for example, in Companies the primary columns are Entity Name and Entity ID)

Users have the option to export all the results in their report, or just a few (by marking the checkbox against relevant rows).

Figure 11: Data exported to Excel using the SPGTable Function

Save

Figure 12: Save Options

Save Screen Criteria (Dynamic Entity List)

After you have built a screen that meets your analysis needs, S&P Cap IQ Pro allows you to save your screen so you do not have to recreate the screen in future sessions. Click on the Save button at the top of the Data Wizard and select Save Screen Criteria as shown in figure 11. All the criteria you have specified will now be saved in your specified save location.

Save List

A 'List' is a static collection of entities, which vary by the dataset you are in. Saving a screen as a list saves a static copy of your screener report, including all the report fields. This will save the static report at the specified save location.

Save Fields as Report

If you want to save the report fields, and not the screen results, you can choose to 'Save Fields as Report'. This allows you to leverage the fields from your current report in different screens that you create.

Save Criteria & Fields (Project)

A Project allows you to save all the criteria you have specified in the Data Wizard as well as the fields in your report. Wherever applicable, this also saves 'Currency' corresponding to financial data items.

Save as Default

If you want to save the criteria you have in your report as a starting point every time you access the Data Wizard, you can 'Save Criteria as Default'. Similarly, if there are certain fields that you would like to have in majority of your reports, you can 'Save Report Fields as Default'.

Alternatively, if you want to go back to the default settings for the data set you are in, you can 'Restore Data Set Defaults'.

Open

Figure 13: Open Options

Open Saved Screen Criteria

If you have already saved a criteria, click on the OPEN button and then select 'Open Saved Screen Criteria'. This will open and add the criteria from your saved screen to the Criteria section.

Open Saved List

If you have saved a static screener report, click on 'Open Saved List' and select the List that you **would like to open**. This will render your report in the Screening Results section.

Open Saved Fields as Report

If you have saved fields as a report that you would like to add to your current screen, click on 'Open Saved Fields as Report'. This will add **the relevant fields to your screener report**.

Open Saved Criteria & Fields (Project)

If you have saved a Project, click on 'Open Saved Criteria & Fields (Project)' and select the project that you like to Open. This will load your report into the Data Wizard.

Open Workbook Query

If a colleague shared a workbook with you that contains an embedded query and you want to examine or modify the query, open that workbook, click on the Open button and then select Open Workbook Query as shown in figure 12 above. The query will load into the Data Wizard. You can then make adjustments to the query and save it as a screen or a project to make it your own for future use.

Using the Data Wizard for Market Data

The Data Wizard allows you to pull market data for company issues, indexes and interest rates into your SNL function-driven models. This workflow is different than that of the other data set groups like Companies, Transactions, etc.

Field Selector

Select Market Data Type

The first step in creating a market data screen is to determine which types of market data you need. Select from the Display drop-down list either Company Issues, Indexes, CDS Single Names or Groups, Interest Rates, or Metals & Mining Commodities.

As each market data type is selected the available fields are updated in the Category and Available Fields areas as shown in

Figure 14 below.

Figure 14: Market pricing data field selectors

Search (For Entities)

For Company Issues, search by using the company name or trading symbol. For Indexes search by using the name of the index and for Interest Rates search by the name of the interest rate. The type-ahead Search will help you find what you need after only a few keystrokes as shown in figure 15 below.

Figure 15: Entity Search

Select Fields

After you compose the list of entities for which you want market data, select the fields you need in your screen and add them to the Selected Fields area. When you have finalized your list, click Apply and the results will be displayed in the Results area.

The Field Selector interface is divided into three main sections: Category, Parameters, and Selected Fields. The Category section on the left lists various data types, with 'Market Capitalization' highlighted. The Parameters section in the center is currently empty. The Selected Fields section on the right displays a list of selected fields, including 'BAC-US (Bank of America Corporation) / Price (\$)' and 'JPM-US (JP Morgan Chase & Co.) / Price (\$)', each with a close button (X). At the top right, there are buttons for 'OPEN SAVED FIELDS AS REPORT' and 'SAVE AS REPORT'. A search bar at the top contains the text 'BAC-US (Bank of America Corporation)' and 'JPM-US (JP Morgan Chase & Co.)'.

Figure 16: Selected fields in market pricing data

Date Range

The next step is to select the date range for which you want your pricing data. By default the Data Wizard displays a begin date of one year prior to the current date. The default end date is the current date. This will cause your results to be displayed in ascending date order. If you want to sort the results in descending date order, simply change the begin date to the most recent date and the end date to the oldest date.

Frequency

After adjusting the date settings, select the frequency that you want to see the market data displayed. Select either Daily, Weekly or Monthly.

The Date Range/Frequency for Market Data interface shows a date range from 10/19/2019 to 10/19/2020 and a frequency of Daily. The interface includes a section labeled 'ORDER' with a list containing the number 1. The Date Range section has two input fields for the start and end dates, separated by a double-headed arrow. The Frequency section has a dropdown menu currently set to 'Daily'.

Figure 17: Date Range/Frequency for Market Data

Currency

The last step before exporting your market data results to Excel is to adjust the currency in which you want to see the market data. By default, the currency is set to the field's Reported Currency. If you change the currency, click Run Screen to update the results.

Manipulating Results and Exporting to Excel

After you run your screen you can change the sort order of any of the column in the Results. Once you are satisfied with the results, to export your screen to Excel as a refreshable SNL function-driven model, click the Export button as shown in figure 17 below.

Figure 19: Market pricing data exported in Excel

SNL Markets Range Function Syntax

The SNL("markets.range") function syntax is as follows:

= SNL("markets.range", entity ID/field range, "begin date", "end date", "Options")

Field Selector (Stand Alone)

The Stand-Alone Field Selector is a helpful tool if you want to add additional field to an existing model. To access this Field.

Selector click on the 'More Data' button in the S&P Cap IQ Pro ribbon and select Field Selector.

Figure 20: Stand-Alone Field Selector location

Figure 21: Stand-Alone Field Selector

The only difference between this Field Selector and the Field Selector used within the Data Wizard is that in this Field Selector a data set must be selected under the Data Set drop-down control.

Insert Screen/SPGScreen

Opens a sidebar to select and insert available screens to a worksheet. The SPGScreen function allows you to rerun dynamic saved screens and projects within your model. Screens and Projects can be created and saved in the Data Wizard.

Data Set

Choose data set from dropdown which will show available screen for selected data set.

Available Screens/Export options

Select Screen/Project from available screen list which you would like to pull within model.

Formula Layout default to Down a column which export all entities down but user can change orientation as Across a Row which can pull data across instead of down.

Output location: You can select cell reference where SPGScreen will export in excel.

If you have a saved Screen for which you want to display a set of fields, enter or cell reference the range of KeyFields in Field Reference (Optional) section as shown in figure below.

The screenshot shows the S&P Capital IQ Pro interface. On the left, an Excel spreadsheet displays the results of the SPGScreen function. The formula bar shows the formula: `=SPGScreen("CIQ_Fundamental_Query_20.02","D",D5:E5)`. The spreadsheet lists various financial entities with their corresponding financial data.

On the right, the S&P Capital IQ Pro sidebar is visible. It shows the 'Data Set' dropdown set to 'Companies'. The 'AVAILABLE SCREENS' section lists various screens with their names and dates. The 'EXPORT OPTIONS' section shows the 'Formula Layout' set to 'Down a column'. The 'Output Location' is set to '=Sheet1!D5:E5'. The 'FIELD REFERENCE (OPTIONAL)' section shows the 'Reference Location' set to '=Sheet1!D5:E5'. The 'APPLY' and 'CANCEL' buttons are at the bottom.

The SPGScreen function syntax is as follows:

= SPGScreen("query name", "Direction", field ID range, "Options:")

Sharing

Embed Query

After creating a screen in the Data Wizard you can save it by clicking the caret next to the Save button and then selecting Save As Screen as discussed earlier in the Using the Data Wizard chapter. If you share the workbook with a colleague, they will be able to refresh the SNLQuery functions in the workbook, but they will not necessarily know the criteria you used to create the dynamic query. In order for your colleagues to understand the parameters that you used in the Saved Screen, you can embed the query in your workbook by clicking Embed Queries in the S&P Cap IQ Pro ribbon.

When the Embed Queries button is clicked, S&P Cap IQ Pro scans the active workbook and lists all the SPGScreen/SNLQuery functions in the workbook as shown below in figure 30. Click OK to continue with embedding the Saved Screens.

Figure 22: Embed workbook queries confirmation dialog

After your colleague opens the workbook, if they click the caret next to the Open button and then select Open Workbook Queries, they will see one or more Query functions that have been embedded into the workbook as shown in figure below. Simply select the queries of interest and then Apply and the Data Wizard will display the original criteria for your Saved Screen. They can now save the Query function or modify it to suit their needs without having to redo the work that you already performed.

Figure 23: Open workbook query selection

Template Library

S&P Capital IQ Pro offers a full library of pre-built templates to meet your data analysis needs. The library contains a range of templates, from single-company snapshots, peer comparisons, and capital structure analysis to templates using our industry specific data sets such as bank branches, energy power plants and real estate properties. As with all of S&P Capital IQ Pro's products, templates are customized for each of the industries we cover to provide you with the data most relevant to your analysis.

Click on the Template Library button in the S&P Cap IQ Pro ribbon to get started.

TEMPLATE NAME	DESCRIPTION	TYPE	RELEASE DATE
Mine Economics Base & Precious Mine Model	This model is designed to allow users to adjust metal prices, costs and production metrics for individual base and precious metal mines and view the impact of these changes on the operations cost metrics, cashflow and NPV.	Metals & Mining	7/26/2021
Mine Economics Base & Precious Metal Percentiles	Examine the 25th, 50th, 75th and 90th percentiles from the Mine Economics dataset and how they have evolved through time versus the commodity average. Filter by region or country, and examine various cost metrics across twelve commodities.	Metals & Mining	7/26/2021
Mine Economics Base & Precious Metal Charting	Analyze historic & forecast metal production supply curves. Benchmark properties or add your own to the chart. Filter based on region or country. Includes copper, gold, lead, nickel, zinc, silver, PGMs, cobalt, molybdenum & U3O8.	Metals & Mining	7/26/2021
Identifier Converter Model	Functional in multiple languages, this model provides search results for up to 1000 companies to retrieve the company name, identifier, ticker, country name and key financial indicators. #CIQ #language	Financials	7/9/2021
Global Energy Aggregate Debt Maturity Profile	Get a comprehensive view of the aggregate debt maturity details for Energy industry. Analyze debt outstanding globally grouped by industry segment, year, country and rating, and broken down into the next 30 years and beyond.	Corporate Issuance	7/9/2021

Convert Formulas

In some cases, your colleagues may not use S&P Capital IQ Pro, but you want to be able to share the hard work you have done by creating your S&P Cap IQ Pro function-driven model with them. If you share a model with them that includes S&P Cap IQ Pro functions, it may not display the results properly.

S&P Cap IQ Pro allows you to convert your S&P Cap IQ Pro function-driven models to static workbooks by clicking the Convert Formulas button in the S&P Cap IQ Pro ribbon. Clicking this button will open Convert Formulas in the sidebar.

Here, you have the ability to convert S&P Cap IQ Pro functions into static tables, or even convert Table function into single-cell functions within a workbook, worksheet, or selected cells.

Figure 24: Convert Formulas in Sidebar

Warning: Once you convert your model into values, all S&P Cap IQ Pro functions within your chosen area will be removed and cannot be restored or refreshed. S&P Capital IQ Pro recommends that you save your model under a different name and convert formulas for that workbook.

Legacy SNL functions

SNLData

SNLData Function Syntax

= SNLData(data set, SNL ID, field ID, secondary key, tertiary key, null value, "Options:")

Data Set

Each SNLData function requires you to specify the data set that you want to use. Each data set name within S&P Cap IQ Pro functions are designated by a number. For a list of all data sets and their respective numbers, see the appendix.

SNL ID

The next parameter in the SNLData function is the SNL ID which is SNL's unique identifier for each entity in SNL's database. The SNL ID varies by data set.

To make your model more dynamic, you may reference a cell within the active workbook already contains your SNL IDs.

SNL Field ID

After you have specified the entity that you want to use, either search for an SNL Field ID by using the Type Ahead Search or Field Selector button highlighted in the red box in figure 24, or use the cell reference button to reference the cell that contains that information in your active workbook as shown in figure 24 above.

Secondary Key

Some fields require that you specify a Secondary Key. Financial fields, for example, must include the period for which want to see the data for the SNL Field ID and the SNL ID (entity) that you used as shown in figure 24 above. If you choose a field using the Field Selector, Secondary Key will automatically update. If you search for a field using Type Ahead Search, appropriate secondary keys will populate to select from directly under the chosen field.

If you do not specify a required Secondary Key, KEYERROR will be displayed in the cell where the SNLData function has been applied.

Tertiary Key

Some fields require that you specify a Tertiary Key. In the example shown in figure 24, the Tertiary Key is the reporting basis. In this case, the reporting basis is an option parameter because if not specified, the Current/Restated value is used. The other option in this example is Originally Reported. If you choose a field using the Field Selector, Tertiary Key will automatically update. If you do not specify a required Tertiary Key, KEYERROR will be displayed in the cell where the SNLData function has been applied.

Optional Arguments (select data sets only)

Specify the currency, conversion method and magnitude. If left blank, these will default to the global settings. Optional arguments only apply to the following data sets: Companies, Mergers & Acquisitions, Real Estate Properties, Capital Offerings, Capital Structure, and Geographic Intelligence.

SNLMarkets

Display

Each SNL Markets function requires you to specify the type of market data that you want to display. It supports Company Issues, Indexes, CDS Single Names or Groups, Interest Rates or Metals & Mining Commodities.

Entity

The next parameter in the SNLMarkets function is the Entity. You may enter ticker-exchange for Companies; company, ticker, or sovereign for CDS Single Names; groups for CDS Groups; Index name, Interest Rate name, or Commodity name for Indexes, Interest Rate, or Metals & Mining Commodities, respectively.

To make your model more dynamic, you may also make a cell reference within the active workbook.

Field Selection

After you have specified the entity that you want to use, enter for an SNL Field ID.

Secondary Key

Some fields require that you specify a Secondary Key. Estimate fields, for example, must include the forward period for which want to see the data for the Field and the Entity that you used. If you do not specify a required Secondary Key, KEYERROR will be displayed in the cell where the SNL Markets function has been applied.

Tertiary Key

Some fields require that you specify a Tertiary Key. These are similar to Secondary Keys and add context to the chosen field.

If you do not specify a required Tertiary Key, KEYERROR will be displayed in the cell where the SNL Markets function has been applied.

Start/End Selection

Once the Entity and Field parameters are chosen, a date range can be entered into the Start End and End Date.

End Date is an optional parameter. Leaving it blank will export a single-cell function for the Entity-Field-Date data point entered. Entering an End Date will export an SNL Markets function with a time series between the start and end dates going down a column.

Optional Arguments

For more information on the Optional Arguments, visit the [Markets function Optional Arguments section](#).

SNLMarkets Function Syntax

= SNL("Markets.Field.Secondary Key.Tertiary Key", Entity, Start Date, End Date, "Options:")

SNLQuery

The SNLQuery function allows you to rerun dynamic saved Screens and Projects within your model. Screens and Projects can be created and saved in the Data Wizard. For more information on saving Screens and Projects see the chapter on using the Save button.

Query Name

Enter, existing queries, or use the cell reference button to designate the name of the saved Screen or Project in the Query Name field.

SNL Field ID Range (optional)

If you have a saved Screen for which you want to display a set of fields, enter or cell reference the range of Key Fields in SNL Field ID Range as shown in figure below.

Optional Arguments

Specify the currency, conversion method and magnitude for additional columns. If left blank, these will default to the global settings.

SNLQuery Function Syntax

= SNLQuery("query name", field ID range, null value, "Options:")

From Data Set

The data set ID from which you want to begin the conversion process.

SNL ID Range

The cell range in which the SNL IDs are located. If you have more than one SNL ID it is best to have this range in a column.

Output Destination Cell

The cell in which the output from the SNLConvert function begins as shown in figure above.

SNLConvert Function Syntax

= SNLConvert("from data set", SNL ID Range, "to data set", output destination cell)

Common Conversions

Companies to Branches

Companies to M&A

Companies to Capital Offerings

SNLDefinition

The SNLDefinition function retrieves the definition of an SNL Field ID indicated in the function as shown in figure below.

Data Set

Enter the data set ID for the SNL Field ID for which you want to display the definition as shown in figure above.

SNL Field ID

Enter or cell reference the SNL Field ID for which you want to display the definition.

Optional Arguments

In the Companies Classic data set, you can select the terminology or language in which you want to see the definition displayed. Click the caret next to Options and then select the language that meets your needs or use the cell reference button to designate a location in your workbook that contains the terminology settings.

Valid terminology options are the following:

en-US	English (Americas)
en-GB	English (UK/Europe/Asia)
zh-CH	Chinese (PRC)
ja-JP	Japanese (Japan)

SNLDefinition Function Syntax

= SNLDefinition(data set, field ID range, "Options:")

SNLTable

SNL Table uses a single function to return data for multiple SNL IDs and multiple fields into a typical table format as shown below. This function is especially helpful when pulling large amounts of data from which other SNL functions can reference. For ease of use, it is best to use the Data Wizard to create a SNLTable function.

=SNLTable("1", Sheet6!D6:D8, Sheet6!E3:H3, Sheet6!E4:H4)						
C	D	E	F	G	H	
SNLTable		Trading Symbol & Exchange	Officer's Name	Total Assets (Reported)	ROAA (%)	
		139474	131269	132264	133348	
			CEO	MRY	MRY	
				Current/Restated	Current/Restated	
	JPM	JPM-US	James Dimon	2,415,689,000	0.75	
	BAC	BAC-US	Brian Thomas Moynihan	2,102,273,000	0.53	
	WFC	WFC-US	John G. Stumpf	1,523,502,000	1.53	

Data Set

Enter data set ID for which you would like to retrieve data. The list in this drop-down is based on your subscription and SNL Web industry Settings. Each data set name within S&P Cap IQ Pro functions are designated by a number. For a list of all data sets and their respective numbers see the appendix.

SNL ID Range

Enter or cell reference the cell range where your entity list is located as shown in figure above. The cell range can be oriented across rows or down a column.

SNL Field ID Range

Enter or cell reference the SNL Field ID Range for which you want to display data as shown in figure above.

Secondary Key Range

Enter or cell reference the Secondary Key Range for the SNL Field ID Range you have used. Note that if you do not use a Secondary Key Range, the SNLTable function uses the range below or next to (depending on orientation) the SNL Field ID Range.

Optional Arguments (select data sets only)

Specify the currency, conversion method and magnitude. If left blank, these will default to the global settings. Optional arguments only apply to the following data sets: Companies, Mergers & Acquisitions, Real Estate Properties, Capital Offerings, Capital Structure, and Geographic Intelligence. Additionally, in the Companies data set you may specify the terminology for field names and fields with text data output. For more information about optional arguments visit the Optional Arguments page.

SNLTable Function Syntax

= snltable(data set, SNL ID range, field ID range, secondary key range, null value, "Options:")

SNL Group Function

The SNL "Group" function allows you to create statistical calculations for a group of companies or deals. With the Group function, this can be done in a single row or column without needing to retrieve data for each entity in your group, and without using Excel to calculate the statistics. For example, if you would like to compare a selected public bank to all other public banks in the U.S., you can create medians/averages/aggregates for that group of companies without compiling information on each public bank individually.

Inputs/Function Syntax

=SNL("Group.Statistic", Data Set, EntityKeys, FieldIDs, Secondary/Periods, "Options:")

To use the Group function you must specify the following parameters:

Statistic to be returned

This will be Median, Average, Maximum, Minimum, Aggregate, Standard Deviation, Percentile, or Count

Data Set

Defines the type of companies or deals. This will be either (1) Companies Classic, (2) Regulated Depositories (287) Insurance Statutory Financials, (5) Mergers & Acquisitions, or (10) Capital Offerings. A list of data sets can be found here.

Universe of companies/deals to be analyzed

References a list of trading-symbols or SNL IDs in a worksheet. This will be the list of companies or deals that statistics will be calculated for.

Field IDs representing the data points you want to analyze.

Secondary Keys/Periods defining the period for selected fields.

Options

Additional options, including the label that should be used in place of the function, and Currency/Magnitude options.

* You may also use previously saved Advanced Search to define the universe of companies/deals. The name given to the saved search will be used in place of cell references. When using a saved Advanced Search, you will not need to specify the data set.

Examples

Example 1 – Using a list of companies/deals from the worksheet

This example in figure 33 below displays how the function can be used to return Median, Average, Aggregate, Maximum and Minimum financial statistics for a list of large banks.

- In this example we are referencing a list of companies. Since we are referencing a list in the sheet, we must also specify the data set. We are using the “Companies” data set, so data set = 1.
- We are able to calculate this statistical data without retrieving and managing data for each individual company in the worksheet.

Figure 25: SNL Group function basic example

Example 2 – Using a previously saved “Saved Screen” to define the group of companies

In this example we are using a previously saved “Saved Screen” called “CaliforniaPublicBanks” to define the companies that are included in the statistical calculations. In this scenario shown in figure below, the “data set” parameter does not need defined, so we leave that parameter blank.

Figure 26: SNL Group function using a saved screen

Example 3 – Including Optional Parameters

This example in figure 35 below displays how the function can be used to return Median, Average, Aggregate, Maximum and Minimum financial statistics for a list of large banks.

- With the optional parameters, we can choose to display the statistic name ("Median", "Average", etc.) in the cell where the function is entered. If this parameter is not specified, the cell will display "SNL".
- You can also use the optional parameters to specify Currency and Magnitude options for data sets that support those options.

SUM																=SNL("group.median","Q","CaliforniaPublicBanks", \$E\$11:\$M\$11, \$E\$12:\$M\$12, "Options: Caption=Median, Currency=USD, Mag=Millions")

Figure 27: SNL Group function using product captions

Available Layouts/Orientations

There are four possible layouts for the Group function. Those options are displayed in below figure.

- Option 1: Fields and Periods across a row. In this layout, the output will display in the same row as the Group function.
- Option 2: Fields down a column and Periods across a row.
- Option 3: Fields across a row and Periods down a column.
- Option 4: Fields and Periods down a column. In this layout, the output will display in the same column as the Group function.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	
17	Layout Option 1:									Layout Option 2:

Figure 28: SNL Group function orientations

Available Data Sets and Available Statistics

The SNL Group function is available for the following data sets and statistics.

<i>Data Set/Perspectives</i>	<i>Statistical Measures Available</i>							
	<i>Median</i>	<i>Average</i>	<i>Maximum</i>	<i>Minimum</i>	<i>Aggregate</i>	<i>StdDev</i>	<i>Percentile</i>	<i>Count</i>
<i>Companies</i>	x	x	x	x	x	x	x	x
<i>Regulated Depositories</i>	x	x	x	x	x	x	x	x
<i>Insurance Statutory Financials</i>	x	x	x	x	x	x	x	x
<i>Capital Offerings</i>	x	x	x	x		x	x	x
<i>Mergers & Acquisitions</i>	x	x	x	x		x	x	x

Figure 29: SNL Group function data set coverage

Aggregates

Aggregates, or weighted averages, are more complex calculations that cannot easily be calculated in Excel. For Balance Sheet or Income Statement items (e.g., Total Assets, Net Income) the aggregate will be a simple sum of the component companies. For ratios, the aggregate statistical measure will provide a weighted average. The weighting factor will usually be the denominator in the ratio. For example, ROAA would be weighted by Average Assets. Aggregates are not currently available for Capital Offerings and Mergers & Acquisitions datasets.

Currency Conversion

Of the five data sets currently available in the Group function, currency conversion is available in the Companies, Capital Offerings, and Mergers & Acquisitions data sets. Because these data sets can include companies or deals from different geographies, with different reporting currencies, it is recommended that you use a currency other than “Reported Currency” for any statistical calculations. Currency settings can be defined in the optional parameters of the Group function (see Example 3 above). If currency is not specified in the optional parameters, the global currency setting will be used.

The Regulated Depositories and US Insurance Statutory Financials data sets consist of U.S. entities and all financials in these data sets will be in U.S. dollars. The currency conversion feature is not currently available for these two data sets.

Exchange Rate Function

The exchange rate function gives you the ability to pull currency exchange rates. It allows you to quickly pull the spot rate for a specific day or the average rate over a custom period into a single cell and build it into your models for easy analysis and charting calculations. Currency settings can be defined in the optional parameters of the Group function (see Example 3 above). If currency is not specified in the optional parameters, the global currency setting will be used.

Function Syntax

```
=snl("Data Set","CurrencyFrom","CurrencyTo","StartDate","End Date",{ "Options:NA=" })
```

Follow these guidelines to specify your function arguments:

- Data Set will always be equal to Exchange Rates.
- Currency From can be any valid currency ISO code that S&P Capital IQ Pro supports.
- Currency To can be any valid currency ISO code that S&P Capital IQ Pro supports.
- Start Date format depends on your Windows operating settings. For example, if your OS regional setting is English (United Kingdom) then your Start Date format will be dd/mm/yyyy.
- End Date is optional. Follow the same rules as Start Date.
 - All arguments are not case sensitive.
 - For the average exchange rate over a custom period, the order of the Start Date and End Date does not matter because the function computes the duration of time between the two dates specified.
 - Arguments surrounded by braces "{ " and " }" in the function syntax above denote that the argument is optional.

Example 1 – Average exchange rate over a period

In this example the function returns the average exchange rate for U.S. dollars to British pound sterling from Aug.1, 2010, to Aug.31, 2010, into cell C2.

C2		fx		=snl("Exchange Rates","USD","GBP","8/1/2010","8/31/2010")					
	A	B	C	D	E	F	G	H	I
1									
2			0.638984						

Figure 30: Exchange rate over period

Example 2 – Spot exchange rate

In this example the function returns the spot rate for U.S. dollars to British pound sterling on Aug. 31, 2010, into cell C2.

C2		fx		=SNL("exchange rates","usd","gbp","8/31/2010")					
	A	B	C	D	E	F	G	H	
1									
2			0.650449						

Figure 31: Exchange rate using spot rate

Cell References

All parameters enclosed in quotes can be made cell references.

In this example, both of the currency arguments (\$E\$2 and \$E\$3) and the date argument (C6) reference different cells within the spreadsheet. Quotes are not required for the arguments when using cell references.

E6		fx		=snl("Exchange Rates", \$E\$2, \$E\$3, C6)						
	A	B	C	D	E	F	G	H	I	J
1					Currency code					
2			From		USD					
3			To		JPY					
4										
5					Spot rate					
6			8/1/2010		86.645352					

Figure 32: Exchange rate using cell references

Optional Argument

The only optional argument in this function is the value that you can specify for Null values and that argument must be placed at the end of the SNL function and shown in the syntax above.

You can display whatever text you want for missing values by entering "NA=" after the 'Options:' text string. If "NA=" is omitted from the function, missing values are displayed as entered in your S&P Cap IQ Pro global settings.

You can use the following special shortcut codes for "NA=":

- NAZ for NA=0
- NAN for NA="" or emptyvalue
- #NA for NA=#NA

Error handling

Cell value equals SNL:

If you enter an invalid value for the Data Set argument then the exchange rate function will return SNL as shown below.

C2		fx		=snl("ExchangeRate" "USD", "GBP", "8/1/2010")						
	A	B	C	D	E	F	G			
1										
2			SNL							

Figure 33: Exchange rate error handling

You may also experience this error when you first enter this function into a spreadsheet if you have selected manually refresh SNL data. To resolve this, simply Refresh your sheet or change your setting to automatically refresh SNL data: go to SNL > Refresh Options and select Automatically refresh SNL data.

Cell value equals NA or your specified Null values setting:

If you enter an invalid currency ISO code or an invalid date, then the exchange rate function will return your specified Null values setting as shown below. The S&P Cap IQ Pro default for Null values is "NA". In this example British pound sterling should have been entered as "GBP".

	A	B	C	D	E	F	G	H
1								
2			NA					

Figure 34: Exchange rate error handling

Optional Arguments for S&P Cap IQ Pro (SPG/SNL) Functions

The optional arguments for currency, currency conversion method and magnitude allow you to customize monetary data to correspond to your geographical preferences.

The general syntax for these arguments is as follows:

=SPGTable(\$B\$26:\$B\$35,\$C\$23:\$D\$23,\$C\$24:\$D\$24," "Options:Curr=EUR, Mag=Thousands,ConvMethod=Recommended")

These optional arguments can be included in SPGTable, SPG, SPGRangeV, SPGScreen, SNLTable, SNLData, SNLQuery, and the SNL Markets Range functions.

If the optional arguments are not included or if an argument is not specified, e.g., "Curr=", then S&P Cap IQ Pro defaults to the global settings listed in Settings.

Currency

The currency argument allows you to specify the target currency of your choice for monetary data.

If you include the optional currency argument in an SPG function it can be prepended by the argument keys: "Curr=" or "Currency=". Upon export from the Data Wizard the default is "Curr=".

The syntax for the currency argument is:

Curr=option value OR Currency=option value
where the option value is the 3-character currency ISO code.

Currency Example

=SPGTable(...,"Options:Curr=EUR")

This function could also be written in the following manner

=SPGTable(...,"Options:Currency=EUR") OR =SPGTable(...,"Options:EUR")

Note: If you want to see monetary data in the native reported currency for the entity then use "Reported currency" instead of an ISO code.

Currency Conversion Method

The currency conversion method allows you to specify the exchange rate that you want to apply to your currency translation.

If you include the optional currency conversion method argument it must be prepended by the argument key "ConvMethod=" or "ConversionMethod=". Upon export from the Data Wizard the default is "ConvMethod=".

The syntax for currency conversion method argument is:

ConvMethod=option value OR ConversionMethod=option value

where the option value is one of the two values shown in the table below.

Option Values	Description
Recommended	Converts data using the relevant date(s) for the data. For example, financial balance sheet data are converted as of date of the end of the period, and financial income statement data are converted using the average exchange rate over the period.
MRSpot	Converts financials data using the most recent spot rate available.

Conversion Method Example

```
=SPGTable(...,"Options:ConvMethod=Recommended")
```

This function could also be written in the following manner:

```
=SPGTable(...,"Options:ConversionMethod=Recommended")
```

Magnitude

The magnitude argument allows you to specify the scaling factor for non-per-share monetary data.

If you include the optional magnitude argument in an SPG function it can be prepended by the argument keys: "Mag=" or "Magnitude=". Upon export from the Data Wizard the default is "Mag=".

The syntax for the magnitude argument is:

Mag=option value OR Magnitude=option value

where the option value is one of the values shown in the table below.

Option Values	Description
Standard	Displays value as reported. Monetary data is scaled into thousands and market data items like market cap is scaled into millions.
Actuals or 0	No scaling factor is applied to the value.
Thousands or 3	Value is scaled into thousands.
Millions or 6	Value is scaled into millions.
Billions or 9	Value is scaled into billions.
Trillions or 12	Value is scaled into trillions.

Magnitude Example

=SPGTable(...,"Options:Mag=Thousands")

This function could also be written in the following manner

=SPGTable(...,"Options:Magnitude=Thousands") OR =SPGTable(...,"Options:3")

Terminology

The terminology option allows you to specify Language Culture for field captions and fields with text data output (e.g., Country, Industry, etc.) for a specific function. If you include the optional parameter for terminology in an SPG function, it should be prepended by: "Term=" or "Terminology="

Supported Values	Language/Culture
zh-CN	Chinese – China
en-GB	English – United Kingdom
en-US	English – United State
ja-JP	Japanese – Japan
es-HN	Spanish – Latin America
pt-BR	Portuguese – Brazil
de-DE	German – Germany

Terminology Examples

=SPGTable(...,"Options:Terminology=EN-GB")

=SPGLabel(DataSet, FieldID, "Options:Terminology=EN-GB")

Currently, terminology is only supported in the Companies data set. Supported terminologies are listed below in figure. Names are based on [MSDN](#) standards.

Notes About Use

- If you choose not to include these arguments in an SPG function then the global settings will be used.
- The optional arguments are not case sensitive
- Each argument must be separated from the following argument by a comma
- The arguments can appear in any order after the "Options:" textstring

Advanced Refresh Data Options & Scheduled Tasks

Advanced Refresh Data

There are several additional ways to refresh your worksheets, aside from using the Refresh button in the S&P Cap IQ Pro ribbon.

Inserting Buttons to Refresh S&P Cap IQ Pro Data

To insert a button that will refresh the S&P Cap IQ Pro function Data in your sheet, click the bottom half of the Refresh icon. There are three options under “Insert Refresh Button”:

- Selected Cells Button: Use this to refresh only the currently selected cells in your worksheet.
- Entire Sheet Button: This option will refresh the entire worksheet that you are currently viewing.
- All Sheets Button: This will refresh all sheets in your active workbook.

Figure 35: Insert refresh button options

Using VBA Commands to Refresh SPG/SNL Data

As an alternative to the simple insert button option described above, S&P Cap IQ Pro also features VBA commands that can be used to refresh the SPG/SNL data in your spreadsheets. Using these commands will require a basic working knowledge of VBA/Macros. There are 3 VBA commands, corresponding with the three refresh options:

- Refresh Selected Cells: `Application.Run ("SNLxlAddin.xla!RefreshActiveCells")`
- Refresh Entire Sheet: `Application.Run ("SNLxlAddin.xla!RefreshSheet")`
- Refresh All Sheets: `Application.Run ("SNLxlAddin.xla!RefreshWorkbook")`

Figure 36: Example of VBA Code

Common Reasons to use VBA Commands to Refresh SPG/SNL Data

- Your worksheet contains multiple S&P Cap IQ Pro functions that must be refreshed in a specific order. This would be true if you have input parameters to one SPG function that are depending on output of another SPG function.
- Large data pulls. If your spreadsheet pulls millions of cells from S&P Cap IQ Pro, performance may be optimized by splitting your data pull into multiple SPGTable functions. By using the VBA commands, you can refresh a specified number of rows or columns at a time without needing to monitor progress and manually refresh one SPGTable after another.
- Using the Windows Task Scheduler to automate data pulls.

Scheduled Task

You can leverage the Windows Task Scheduler to automatically refresh S&P Cap IQ Pro worksheets on a specific time interval (daily, weekly, etc.). To automatically refresh your worksheet at a recurring interval, follow the steps below.

Step 1: Set Security Level for Excel Macros

- Enable all macros

Microsoft Office Button > Excel Options > Trust Center > Trust Center Settings... > Macro Settings
= 'Enable all macros'

Figure 37: Changing macro settings

Step 2: S&P Cap IQ Pro Required Settings

- Select Keep Me Signed In option on the Sign In dialog

Figure 38: Choosing Keep Me Signed In within the Sign In dialog

Step 3: Insert Macro to Refresh S&P Cap IQ Pro data when Excel workbook is opened

– Add Workbook_Open macro in ThisWorkbook object

Open Visual Basic Editor (Alt + F11) > Double click on 'ThisWorkbook' from Project Explorer > Add the VBA code shown below:

Private Sub Workbook_Open

Start = Timer + 10

'Start Timer

Do While Timer < Start

'Wait (Pause) to upload Add-in properly

DoEvents

Loop

Update_Data

'Run Macro to update data

End Sub

Figure 39: Adding macro to open workbook

– Add Macro in module using VBA refresh functionality

Open Visual Basic Editor (Alt + F11) > Insert > Module > Add 'Update_Data' macro shown in the screenshot below: There are three VBA commands, corresponding with the three refresh options:

- Refresh Selected Cells: Application.Run ("SNLxLAddin.xls!RefreshActiveCells")
- Refresh Entire Sheet: Application.Run ("SNLxLAddin.xls!RefreshSheet")
- Refresh All Sheets: Application.Run ("SNLxLAddin.xls!RefreshWorkbook")

Figure 39: Adding macro to open workbook

Step 4: Add Scheduled Task

Windows 7

Start > Control Panel > Administrative Tools > Task Scheduler

Figure 41: Adding scheduled task

Figure 42: Selecting Task Scheduler

Schedule a new task

- Double-click Add Scheduled Task to start the Scheduled Task Wizard, and then click next in the first dialog box.
 - Control Panel > Scheduled Tasks > Add Scheduled Task
- Click Browse and select file that you want to schedule, and then click Open.
- Type a name for the task, and then choose one of the following options:
 - Daily
 - Weekly
 - Monthly
 - One time only
 - When my computer starts (before a user logs on)
 - When I log on (only after the current user logs on)
- Click Next, specify the information about the day and time to run the task, and then click Next.
- Click Next, and then click Finish after you verify the choices that you have made.

Settings

You can customize your S&P Cap IQ Pro experience by clicking the Settings button in the S&P Cap IQ Pro e ribbon, which will open the Office Settings dialog as shown below in figure.

Proxy Settings

S&P Cap IQ Pro resolves the proxy settings from Internet Explorer. If you choose to communicate directly through a proxy that is different from Internet Explorer, then the proxy settings must be specified. This information can typically be supplied by your IT administrator if it is needed. For more information about this feature, review the details in the [S&P Capital IQ Pro Technical Guide](#).

Data Channel Proxy IP Address – The IP address through which S&P Cap IQ Pro will communicate with S&P Capital IQ Pro servers, e.g., 127.0.1.1

Data Channel Proxy Port – The proxy port through which S&P Cap IQ Pro will communicate with S&P Capital IQ Pro servers, e.g., 8888

Proxy Username – The proxy port username.

Proxy Password – The proxy port password.

The screenshot shows a window titled "S&P Capital IQ Pro" with standard Windows window controls. Inside the window is a dialog box titled "Office Settings" with a "RESET" button in the top right corner. On the left side of the dialog is a vertical list of settings categories: "Data Settings", "Export Options", "Save Location", "Linking", "Colors", "Proxy" (which is highlighted with a black background and a white right-pointing arrow), and "Capital IQ Settings". The main area of the dialog is divided into two columns. The left column contains the labels "Data Channel Proxy IP Address", "Data Channel Proxy Port", "Proxy Username", and "Proxy Password". The right column contains four corresponding text input fields, each with a placeholder text: "Enter IP address", "Enter port number", "Enter proxy username", and "Enter proxy password".

RESET Options

Delete Browser Cache

On occasion it may be necessary to clear your browser cache for S&P Cap IQ Pro. Click the Reset button, select Delete Browser Cache and then click Clear Cache on the confirmation dialog.

Delete Isolated Storage

You can delete Isolated Storage for deleting user credentials saved by checking Keep Me Signed In option while sign-in to S&P Cap IQ Pro and other details. Click Reset button, select Delete Isolated Storage and then click on Delete Isolated Storage on the confirmation dialog. In order for the S&P Cap IQ Pro to be reset with the cleared Isolated storage, you must restart Excel.

Delete Workbook Cache

You can delete cache stored in an excel workbook. Click Reset button, select Delete Workbook Cache and then click on Delete Cache on the confirmation dialog. In order for the S&P Cap IQ Pro to be reset with the cleared workbook cache, you must restart Excel.

Application Defaults

You can reset S&P Cap IQ Pro to the default Settings. Click Reset button, select Application Defaults and then click Reset Application Settings on the confirmation dialog. In order for the S&P Cap IQ Pro to be reset with the default application settings, you must restart Excel.

Data Settings

You can customize your data specific setting by clicking on Data Settings in the S&P Cap IQ Pro ribbon, which will open the Office Settings dialog as shown below in figure. In this chapter, we will describe how each of these settings change your experience.

Office Settings [RESET]

Data Settings	Industry Classification	☒ S&P Capital IQ/GICS ☐ S&P Market Intelligence
Export Options	Currency	U.S. Dollar (USD)
Save Location	Conversion Method ?	Recommended
Linking	Terminology ?	English (Americas)
Colors	Application Language	Microsoft Excel language (recommended)
Proxy	Unit of Measurement ?	U.S. Customary
Capital IQ Settings	Magnitude ?	Standard
	Display Null Value As ?	0
	Reporting Basis ?	Current/Restated
	Date Comparison ?	Filing Date
	Refresh Scope	Entire Sheet
	Refresh Progress Bar ?	Display Refresh Progress Bar
	Enable CIQ Formula Refresh ?	Yes, refresh CIQ Formulas with S&P Cap IQ Pro

[OK] [CANCEL]

Industry Classification

We are providing two industry classification options. Default is selected based on the user profile settings. Select anyone as a default Industry Classification by clicking on radio button based on preferred industry classification. It will govern the industry classification options in Screener, DataWizard, FieldSelector etc., though user will have the option to manually change to another industry classification while adding criteria (or) browsing the industry fields.

Currency

By default, this setting is Reported currency, but you can choose from the values in the drop-down list. Select default currency for monetary or financial data items. For a complete list of currencies supported by S&P Cap IQ Pro visit the Valid ISO Currency Codes in the [MI Office Help page](#).

* Some of the legacy data sets doesn't support Currency Conversion.

Conversion Method

Currency can be converted at the most recent spot rate or the Recommended method which converts data using the exchange rate at the relevant dates, e.g., balance sheet items at end of period rates.

Conversion Method ⓘ

Recommended

Recommended
Most recent spot rate

Terminology

Choose the local terminology for data results, field names, and definitions. This setting does not impact the language used in the application’s instructions, dialogs, and menus.

Valid Terminology settings are listed below.

Terminology	English (Americas) ▼
	English (Americas)
	English (UK/Europe/Asia)
	Chinese (PRC)
	Japanese (Japan)
	Spanish (Latin America)
	Portuguese (Brazil)
	German (Germany)

Application Language

Select the language to be used for the application dialogs and menus. By default, the language of Microsoft Excel will be used (if supported). Supported languages include English (entire application), Japanese, Chinese, Portuguese, Spanish, and German (Companies and M&A data sets) as shown below.

Application Language

Microsoft Excel language (recommended) ▲

Microsoft Excel language (recommended)
English (US/Canada)
中文 (Chinese)
日本語 (Japanese)
Español (Spanish)
Português (Portuguese)
Deutsch (German)

Unit of Measurement

Choose US Customary or Metric measure standards, e.g., miles or kilometers; square feet or square meters.

Unit of Measurement	U.S. Customary
	U.S. Customary
	Metric

Magnitude

Select the default magnitude for monetary or financial data items. This setting only applies to the following data sets: Companies, Mergers & Acquisitions, Real Estate Properties, Capital Offerings, Capital Structure, Geographic Intelligence, and Metals & Mining Projects.

Magnitude ?	Standard
	Actuals (0)
	Thousands (3)
	Millions (6)
	Billions (9)
	Trillions (12)

Null Value Text

Specify the default value that should be returned in place of NA values (e.g., n/m, -, "").

Reporting Basis

Reporting Basis is applied to CIQ Financial Fundamentals and SNL Financial Fundamentals. Select the desired Reporting Basis to retrieve the data from specific filings.

Current/Restated will pull the Financials from most recent filing document.

Originally Reported will pull the Financials from Originally filed document for the period.

Preliminary Reported will pull Preliminary earnings release and it may translate to Current/Restated

Reporting Basis ?	Current/Restated
	Current/Restated
	Originally Reported
	Preliminary Reported

Refresh Scope

Refresh Scope can be set for the Refresh Icon on the S&P Cap IQ Pro Ribbon. Depending on the settings Refresh Icon will refresh S&P Cap IQ Pro functions. It will also be applicable to CIQ functions if the user selects enable CIQ Functions refresh via S&P Capital IQ Pro as Yes option.

Selected Cells will refresh the Selected Cell(s) having S&P Capital IQ Pro functions.

Entire Sheet will refresh the Active Sheet selected by the user.

Entire Workbook will refresh all the sheets within active workbook.

Refresh Scope	Entire Sheet
	Selected Cells
	Entire Sheet
	Entire Workbook

Export Options

All the Options within Export Options are aimed to provide preferred choice to set while exporting the details from the Data Wizard.

Function Options

Include or exclude currency and magnitude values in the S&P Cap IQ Pro Options string when from the Data Wizard.

Function Options	Included in export
	Included in export
	Excluded from export

SPGTable options excluded:

fx	<code>=SPGTable(\$B\$57:\$B\$61,\$D\$54:\$J\$54,\$D\$55:\$J\$55, "Options: Curr=, ConvMethod=, Mag=")</code>
-------------	--

SPGTable options Included:

fx	<code>=SPGTable(\$B\$57:\$B\$61,\$D\$54:\$J\$54,\$D\$55:\$J\$55, "Options: Curr=USD, ConvMethod=MIRecommended, Mag=3")</code>
-------------	---

Dynamic Field Labels

Include or exclude dynamic field labels when exporting from the Data Wizard.

Dynamic Field Labels	Included in export
	Included in export
	Excluded from export

Field Export Format

You can export Key Field ID (or) Key Field Alias details used in all SPG Functions.

Field Export Format	Export Field Alias
	Export Key Field
	Export Field Alias

Warn me before Overwriting data

You can set as Yes to get the Warning Message information for any SPG Functions overwriting the contents in cell(s) (or) No to avoid any warning message.

Warn me before overwriting data	No
	Yes
	No

Default Orientation

You can set data export orientation based on the desired choice among the list of options available below.

Saved Query Folder

Set the default location for saving saved Screens and Projects. By default S&P Cap IQ Pro saves them in the following directory: C:\Users\[Username]\Documents\S&P Global Market Intelligence\S&P Capital IQ Office\Queries.

To change where Screens and Projects are saved by default, click the Browse button as shown below.

Error/Feedback Messages

S&P Capital IQ Pro is designed to provide feedback to you as you interact with the product. There are two types of feedback messages you may experience: dialog or toast messages, and in-cell Excel messages. Some examples of each are described or illustrated below.

Dialog/Toast Error Messages

Like the inline error message, the dialog or toast message is displayed to provide simple feedback about an operation that either succeeded, failed, or requires you to interact with the product to resolve the issue.

Example 1 – Success Message

In the example above in figure, after you export your screen results to Excel, you will see a green toast message letting you know that the export was successful. After five seconds, a green toast message will automatically disappear.

Example 2 – Warning Message

In the example in the Companies data set shown above in figure, after running the initial screen, the Industry filter was changed from All Industries to Banking. As soon as the Industry is changed, an orange dialog message is displayed to alert you to the fact that your criteria has changed. To resolve this condition in this case, click Run Screen to see your updated screen results. After five seconds an orange toast message will automatically disappear.

Example 3 – Failure Message

In this example shown above in figure, when selecting fields in the Field Selector, too many fields have been selected. The error message indicates the specific limit on the number of columns (fields) that can be used in the screen. Before continuing, you should acknowledge the error message by closing it.

In-cell Excel Error Messages

In-cell error messages are displayed in Excel within a worksheet cell if you create a function or formula that contains an error. S&P Cap IQ Pro also uses this feedback to alert you to conditions of the functions you have created. List below are examples of S&P Cap IQ Pro in-cell error messages.

- #REFRESH – Indicates that the S&P Capital IQ Pro function is in the process of being refreshed from S&P Capital IQ Pro servers.
- #PEND – Indicates that the S&P Cap IQ Pro should be refreshed to get the most up to date data from the S&P Capital IQ Pro servers. This also appears when an SPGTable function is exported from the Data Wizard before the export is complete.
- #ERROR – Indicates that there is a problem refreshing an SPG function.
- #INVALID COMPANY ID – Indicates that Identifier/Ticker used is an Invalid ID in all SPG Functions
- #INVALID METRIC NAME – Indicates the Key Field ID / Field Alias / Metric used is an incorrect one.
- #INVALID FUNCTION PARAMETER – Indicates that an invalid parameter has been used in an SPG function.
- #OUTSIDE SUBSCRIPTION – Indicates that the SPG function you are attempting to refresh falls outside of your existing subscription.
- KEYERROR – Indicates that a field in an SPG function is missing or has an errant entry where the secondary or tertiary key is expected by the function.
- DEFUNCT – Indicates that the field in an SPG function is no longer valid. Contact SPG Support to determine if the field has been replaced by a comparable field.
- InvalidCurrency – Indicates an invalid currency code has been included in the Options string in an SPG function. To resolve this error, check that the currency code is valid. A list of valid currency codes is located in the M S&P Cap IQ Pro Help.
- InvalidMagnitude – Indicates an invalid magnitude code has been included in the Options string in an SPG function.
- InvalidConvMethod – Indicates an invalid conversion method code has been included in the Options string in an SPG function.
- InvalidParameter – Indicates that an invalid parameter has been used in an SPG function.
- #NAME – This is an Excel error that is displayed when the text in a formula or function is not recognized. For SPG functions, this occurs if the worksheet contains an SPG function but SPG Office is not installed properly.

Frequently Asked Questions

Please visit our [S&P Capital IQ Pro Help page](#) that lists our FAQs for S&P Cap IQ Pro.

Appendix

Data Set List

The following table lists the data set numbers are used in SNL functions like SNLData, SNLConvert, SNLDefinition and SNLTable

Data Set Group	Data Set Number	Data Set Name
Company Data	266637	Companies
	311682	Key Developments
	2	Regulated Depositories (U.S.)
	246806	Insurance Product Fillings (U.S.)
	287	Insurance Statutory Financials (U.S.)
	113573	Reinsurance Relationships (U.S.)
	16	Energy Compnies by State
	11	Regulated Energy Companies
	19	Wireline Regulatory
	1	Companies (Classic)
	9	Specialty Financial Services (U.S.)
Asset Data	17	Branches (U.S.)
	113882	Insurance Investment Holdings (U.S.)
	233518	Insurance Investment Transactions (U.S.)
	18	Coal Mines
	126278	Monthly Fuel Deliveries
	12	Power Plants
	14	Power Plant Units
	262880	Transmission Projects
	20	Media and Communication Assets
	113572	Television Networks
	243327	Metals and Mining Projects
	246673	Metals and Mining Drill Results
	246626	Metals and Mining Claims
	261002	Metals and Mining Capital Costs
	3	Real Estate Properties

Data Set Group	Data Set Number	Data Set Name
Capital and M&A	275259	Transactions
	5	SNL Mergers and Acquisitions
	113555	SNL Broadcast M&A
	10	SNL Offerings
	321247	Securities Summary

S&P Capital IQ Pro Period Formats

The following are date codes used in SPG functions like SPGTable, SPGScreen, and single cell SPG Functions.

SPG Function Date Formats

Format	Description	Example
FQyyyy	Specific fiscal quarter	FQ12017
FYyyyy	Specific fiscal year	FY2016
FHyyyy	Specific fiscal interim period	FH12016
YTDyyyy	Specific YTD	YTD22017
LTMyyyy	Specific LTM	LTM22017
CYyyyy	Specific calendar year	CY2017
CQyyyy	Specific calendar quarter	CQ12017
FQ0	Latest fiscal Quarter	FQ0
FY0	Latest fiscal Year	FY0
FH0	Latest fiscal interim period	FH0
CQ0	Latest calendar quarter	CQ0
CY0	Latest calendar year	CY0
YTD	Year to date	YTD
LTM	Last twelve months	LTM

Relative Period support on Add Criteria /Report fields

Source	Period Type	Period Format
SNL Financial Fundamentals	Year	FY0, FY-1, FY-2 etc...till FY-29
	Quarter	CY0, CY-1, CY-2 etc...till CY-29
	LTM	FQ0, FQ-1, FQ-2 etc...till FQ-119
	YTD	CQ0, CQ-1, CQ-2 etc...till CQ-119
	Interim	LTM, LTM-1, LTM-2 etc...till LTM-119 YTD (no relative offset) FH0 (no relative offset)
S&P Capital IQ Fundamentals	Year	FY0, FY-1, FY-2 etc...till FY-46
	Quater	CY0, CY-1, CY-2 etc...till CY-46
	LTM	FQ0, FQ-1, FQ-2 etc...till FQ-187
	YTD	CQ0, CQ-1, CQ-2 etc...till CQ-187
	Interim	LTM, LTM-1, LTM-2 etc...till LTM-187 YTD (no relative offset) FH0 (no relative offset)
Third Party – Private Company Data	Year	FY0, FY-1, FY-2 etc...till FY-29
	Year	FY0, FY-1, FY-2 etc...till FY-23
Insurance Statutory Financials	Quarter	FQ0, FQ-1, FQ-2 etc...till FQ-75
	LTM	LTM (no relative offset)

The following are date codes used in SNL functions like SNLData, SNLConvert, SNLDefinition and SNLTable.

SNL Function Date Formats

Format	Description	Example
yyyyQq	Specific quarter	2013Q2
yyyyY	Specific year	2012Y
yyyyH1/H2	Specific interim period	2014H1
yyyyTq	Specific YTD	2012T2
yyyyLq	Specific LTM	2013L3
MRQ	Most recent quarter	MRQ
MRY	Most recent year	MRY
MRH	Most recent interim period	MRH
YTD	Year to date	YTD
LTM	Last twelve months	LTM

By adding brackets, dates can be made relative to the MRQ, MRY, MRH, LTM or YTD. Examples: [MRQ-1], [MRH-2].

About S&P Global Market Intelligence

At S&P Global Market Intelligence, we understand the importance of accurate, deep and insightful information. We integrate financial and industry data, research and news into tools that help track performance, generate alpha, identify investment ideas, perform valuations, and assess credit risk. Investment professionals, government agencies, corporations and universities around the world use this essential intelligence to make business and financial decisions with conviction.

S&P Global Market Intelligence is a division of S&P Global (NYSE: SPGI), the world's foremost provider of credit ratings, benchmarks and analytics in the global capital and commodity markets, offering ESG solutions, deep data and insights on critical business factors. S&P Global has been providing essential intelligence that unlocks opportunity, fosters growth, and accelerates progress for more than 160 years. For more information, visit www.spglobal.com/marketintelligence.
